IP, Licensing & Trademark Strategy

Ownership

- All BOLTE work product owned collectively pre-incorporation (held in trust by founders), per MOU + IP Assignment. Inventors attributed.
- Prior IP excluded via Schedule A. Third-party deps: MIT/Apache-2.0 only for AeroPulse-NG core.

Licensing

- Dual-use software default: Apache-2.0 (patent grant) or MIT for libraries; proprietary + NDA for sensitive defence modules (intercept logic, threat libraries, deployment configs).
- Competition submissions: participants retain IP; NASS gets non-exclusive royalty-free licence to run/evaluate/promote. Keep trade secrets out of public decks/videos.
- Future commercial: viable inventions → provisional filing before public disclosure; open-core where sovereignty/training benefits.

Trademark & CAC path (Nigeria)

1. CAC: reserve business/company name **BOLTE** (+ variants), then incorporate Ltd (post-MOU conversion).
2. Trademarks Registry: search, file wordmark **BOLTE** in classes 9 (apparatus/software), 42 (R&D/engineering), and 35/41 if merch/training expands. Monitor opposition, renew.
3. Domain/social: secure **bolte.[ng/com]** + handles when budget allows — currently TBD.
4. Record everything: invention disclosures, lab notebooks, commit history, filing receipts.

Requires lawyer/agent review. No filing made yet.

BOLTE Corporate Documentation — template/draft (requires review where noted)

NASS Rulebook takes precedence for competition matters
