Q&A Bank (with short answers)

1. Cost? ~\$150 SDR + commodity PC vs \$M radar; locally maintainable.

2. Offline? Yes, air-gapped by contract; synthetic + recorded replay need no internet.
3. Safety? Advisory STCA per Doc 4444 5NM/1000ft; human controller decides; SI-metric display.
4. Limits? Synthesized FFT now, real I/Q next; single-site now, multi-site later; cooperative targets primarily, dark-target heuristics for gaps.
5. Harmattan? Dust estimate + ISA fallback + multi-source weather priority (AWOS > D-ATIS > METAR).
6. Why not FlightRadar24? Needs internet, no tactical overlays, no sovereign control.
7. Defence dual-use ethics? Legitimate situational awareness only, lawful users, locally sustained.
8. AI use? Disclosed; core algorithms hand-built (EKF, R*-tree, decoders), AI for drafting/docs only.
9. IP? BOLTE-owned, MIT/Apache deps only; NASS licence is non-exclusive promotional.
10. Next 90 days? Real I/Q tap, AWOS wiring, field trial at [TBD site], DB writers.
