

business-plan

Business Plan (Lean v0.1)

1. Identity

See Canon. Pre-CAC collective; converting to Ltd.

2. Problem

Nigeria over-relies on foreign tech for security-critical functions; secondary aerodromes/tactical sites underserved; talent leaks for lack of build opportunities.

3. Solution

Indigenous R&D → prototypes → deployable systems. Flagship AeroPulse-NG proves model: sovereign, offline, locally maintainable surveillance at ~1% of import cost.

4. Customers (first)

NAMA-style civil operators of unjustified-radar aerodromes; defence/tactical users needing air-gapped picture; training institutions; later: MRO, airport logistics, agri/energy adapters.

5. Model

Pilots + hardware kits + integration/support + training; IP licensing for dual-use cores; grants/prizes (incl. NDAIE) into treasury (50% retained).

6. Go-to-market

NDAIE visibility → field-trial partner [TBD] → trial report → paid pilots → facility + CAC → scale. Website + docs + exhibition drive credibility.

7. Team

2 founders + 5 (Treasurer, Prod/Ops, 3 builders). See 05-people/ .

8. Financials (placeholder)

Costs: components (SDR ~\$150/unit + PC), travel Lagos, lab setup [TBD \$]. Revenue: pilots TBD. Treasury-first discipline; monthly ledger. Full sheet to be added post-trial pricing.

9. Milestones

26 Sept apply → 14 Oct video → 28 Oct semi → 27 Nov finals → Q1 2027 live RF trial → mid-2027 Ltd + 2nd product.

10. Ask

Seeking: test site access, mentorship, components funding, legal pro-bono for CAC/trademark. Contact: [TBD].
